

AMD Embedded R-Series SOC

Compiler Options Quick Reference Guide

GNU compiler collection (gcc, g++, gfortran)

Latest release: 5.2.0, July 2015

<http://gcc.gnu.org>

Intel compiler (icc,icpc,ifort)

Latest release: 15.0.3, April 2015

<https://software.intel.com>

Architecture	
Generate instructions that run on Embedded R-Series SOC	-march=bdver4
Generate instructions for the local machine	-march=native
Optimization Levels	
Disable all optimizations (default)	-O0
Speed and code optimizations	-O1
More optimizations	-O2
Aggressive optimizations	-O3
Maximize performance	-Ofast
Additional Optimizations	
Unroll all loops	-funroll-all-loops
Generate memory preload instructions	-fprefetch-loop-arrays --param prefetch-latency=300 (300-700)
Profile-guided optimization	-fprofile-generate, -fprofile-use
Disable aggressive loop optimizations to preserve code correctness	-fno-aggressive-loop-optimizations
Instruction reordering	-fschedule-insns2 -fsched-pressure
Enable Link-time optimization	-flto
Don't split AVX unaligned store	-mno-avx256-split-unaligned-store
Reduce register live range	-flive-range-shrinkage
Enable vectorization	-ftree-vectorize
Local arrays are put on stack	-fstack-arrays
Perform branch target register load optimization	-fbbranch-target-load-optimize
AMD Math library	-L/opt/ACML/acml-6-1-0-gfortran-64bit/gfortran64/lib -lacml
Other options	
Generate IEEE arithmetic code	-mieee-fp
Enable faster, less precise math operations	-ffast-math
Enable OpenMP #pragma	-fopenmp
OpenMP threads and affinity	export OMP_NUM_THREADS=4 export GOMP_CPU_AFFINITY="0-3"

Architecture	
Generate instructions that run on Embedded R-Series SOC	-march=core-avx2
Optimization Levels	
Disable optimizations	-O0
Code size and locality optimization	-O1
Code speed optimization (default)	-O2
More aggressive loop and memory optimizations, prefetching	-O3
Maximize code speed	-fast
Additional Optimizations	
General compiler-guided loop unrolling	-unroll
Complete loop unrolling for loops with small counts	-unroll-aggressive
Improve precision of floating division	-prec-div
Inter-procedural optimizations	-ipo
Loop vectorization enabled	-vec
Compiler analysis based loop vectorization	-vec-threshold100
Enable code vectorization	-simd
Use and replace transcendental functions with faster but less precise implementations	-fast-transcendentals
More aggressive optimization for float	-fp-model fast=1
Use alternate malloc algorithm and configure it for speed	-qopt-malloc-options=2
Profile-guided optimization	-prof-gen, -prof-use
Enable prefetching	-qopt-prefetch
AMD Math library	-L/opt/ACML/acml-6-1-0-ifort-64bit/ifort64/lib -lacml
Other options	
Enable OpenMP directives	-fopenmp
Generate multi-threaded code for loops	-parallel

AMD Embedded R-Series SOC

Compiler Options Quick Reference Guide

PGI compilers (pgcc, pgcpp, pgfortran)

Latest release: 15.7, July 2015

<http://www.pgroup.com>

Open64 compilers (opencc, openCC, openf95)

Latest release: 4.5.2.1 , March 2013

Architecture		Architecture	
Specify target processor	-tp piledriver	Specify target processor	-march=bdver2
Optimization Levels		Optimization Levels	
Local optimizations (default)	-O1	Create instruction for the local machine	-march=auto
Additional Optimizations		Additional Optimizations	
Global optimizations	-O2	Local optimizations	-O1
Local, global optimizations, code hoisting, scalar replacement	-O3	Global optimizations	-O2
Guarded invariant floating point expressions code hoisting	-O4	Local and global optimizations, loops optimization, prefetching	-O3
Choose generally optimal optimization flags	-fast	A selection of optimizations	-Ofast
Other options		Other options	
Enable auto-concurrentization of loops on all available CPU cores	-Mconcur=allcores	Optimizations on multi-core systems for scalability	-ms0
Alternative code generation for parallelized loops	-Mconcur=altcode:32	Interprocedural analysis	-ipa
Enable loop parallelization with reductions	-Mconcur=assoc	Function inline processing	-finline
Automatically bind threads to system's cores	-Mconcur=bind	Link against special versions of standard library routines	-ffast-stdlib
Parallelize code with block cyclic distribution.	-Mconcur=dist:block cyclic	Calculate square root using reciprocal square root operation	-OPT:fast_sqrt=ON
Use thread affinity for NUMA architectures	-Mconcur=numa	Enable loop fission	-LNO:fission=ON
Interprocedural analysis	-Mipa=const fast inline libc	Enable loop fusion	-LNO:fusion=ON
Remove functions which are never used	-Mipa=vestigial	Profile based optimization	-fb_create, -fb_opt
Non-temporal moves	-Mmovnt	Prefetch a number of cache lines	-LNO:prefetch_ahead=3
Profile guided optimizations	-Mpfi, -Mpfo	Relaxed IEEE rules/specifications	-ffast-math
AMD Math library	-L/opt/ACML/acml-5-3-1-pgi-64bit/pgi64/lib -lacml	AMD Math library	-L/opt/ACML/open64_64/lib -lacml
Other options		Other options	
Enable OpenMP directives	-mp	Enable OpenMP directives	-mp
Enable OpenACC directives	-ta=radeon -acc	OpenMP threads and affinity	export OMP_NUM_THREADS=4 O64_OMP_AFFINITY_MAP=0-3
Output OpenACC debug information	export PGI_ACC_DEBUG=1 export PGI_ACC_TIME=1	Permits storing floating point variables in registers	-ffloat-store
		Use "huge" 2 MB pages for heap, text and data segments	-HP
		Set FP operations accuracy level	-fp-accuracy

AMD Embedded R-Series SOC

Compiler Options Quick Reference Guide

Microsoft Visual Studio 2015

Latest Release: July 2015

<http://msdn.microsoft.com/en-us/library/fwkeyyhe.aspx>
<http://msdn.microsoft.com/en-us/library/vstudio/60k1461a.aspx>
<http://www.microsoft.com/visualstudio>

Architecture	
Generate instructions that run on Embedded R-Series SOC	/arch:AVX2
Favor AMD architecture (x64 only)	/favor:AMD64
Optimization Levels	
Maximize performance	/O2
Eliminate unreferenced function and/or data	/OPT:REF
Perform identical COMDAT folding	/OPT:ICF
Output an informational message for loops that are auto-vectorized	/Qvec-report:1
Enable automatic parallelization of loops marked with the #pragma loop() directive	/Qpar
Additional Optimizations	
Maintain the precision for floating-point operations through proper rounding	/fp:precise
Optimize floating-point code for speed at the expense of floating-point accuracy and correctness	/fp:fast
Whole Program Optimization	/GL
Profile guided optimization	/LTCG:PGI and /LTCG:PGO
AMD Math library	-L\opt\ACML\ifort64\lib\libacml_dll.lib
